INFORMATION

For use on newly seeded or over-seeded established plantings of the following grasses: Kentucky bluegrass, centipedegrass, tall fescue, fine fescue (creeping red, chewings, hard), and perennial ryegrass.

Mesotrione may be applied to home lawns, recreational areas, golf courses and sod farms.

This product contains 0.15 pounds of mesotrione per acre per application. The maximum number of broadcast applications per site per year is three. Do not apply more than 0.45 pounds of mesotrione active ingredient per treatment site per year.

Apply on a calm day.

When making applications to newly seeded and over seeded established lawns and turf, apply mesotrione impregnated on fertilizer as the last step in the planting process.

Best results will be obtained if ¼ to ½ inch of water is provided by rainfall or irrigation within three days of treatment. Dry conditions following application may reduce herbicide activity.

Mesotrione may cause temporary whitening of turfgrass foliage. In general, symptoms appear five to seven days after application and may last up to 14 days. Discoloration is most likely to occur on ryegrass lawns and turf.

RESTRICTIONS

- Do not use this product on flowers, shrubs, trees, fruit or vegetable plants. Cana, day lilies and irises are especially susceptible to injury.
- Do not graze or feed livestock forage from areas treated with this product.
- Do not treat golf course greens with this product.
- Do not apply to Bentgrass, Bermudagrass (common), improved seeded Bermudagrass, Zoysiagrass, Dichondra, Kikuyugrass, Bahiagrass or Lippia lawns and turf.
- Do not apply on organophosphate or carbamate insecticide within seven days of an application of this product as turf injury may occur.

APPLICATION INSTRUCTIONS

Newly Seeded or Over Seeded Areas

Mesotrione applied at planting prevents the emergence of crabgrass seedlings and controls broadleaf weeds without harming desirable turf grasses listed below. Turfgrass and lawns may be seeded and weeds controlled at the same time. Apply mesotrione impregnated on fertilizer as the last step in the planting process.

Spring Seeding: For control of crabgrass, common chickweed, mouse ear chickweed, henbit, corn speedwell, hairy bittercress, heal-all, woodsorrel, dollarweed, volunteer bentgrass, dandelion, white clover, black medic, hop clover, nimblewill, ground ivy, broadleaf plantain, buckhorn plantain, Carolina plantain, hedgeweed, old world diamond flower, tufted lovegrass, Shepherd's purse, Florida pusley, common purslane, common lambsquarters, pigweed, kochia, wild violets, and other broadleaf weeds. Apply 187 pounds of fertilizer (0.15 pounds active ingredient per acre of mesotrione impregnated on fertilizer) per acre of turf. Apply 4.3 lbs. of this product per 1,000 sq. ft. Apply to newly seeded or to over-seeded established plantings of the following grasses: Kentucky bluegrass, centipedegrass, tall fescue, fine fescue (creeping red, chewings, hard), and perennial ryegrass. Mesotrione may reduce the density of fine fescue seedlings. Mesotrione can be used on grass seed blends that contain less than 20% by weight of fine fescue (creeping red, chewings, hard).

For extended control of weeds listed above, a second application of 0.08% mesotrione on fertilizer can be applied six weeks after the first application. A second application will aid in control of dandelion and perennials such as clover, ground ivy, and volunteer bentgrass. For extended season long control of crabgrass and foxtail, apply mesotrione in combination with a preemergence herbicide.

Fall Seeding: For control of crabgrass, common chickweed, mouse ear chickweed, henbit, corn speedwell, hairy bittercress, heal-all, knawel, woodsorrel, dollarweed, volunteer bentgrass, dandelion, white clover, black medic, hop clover, nimblewill, ground ivy, broadleaf plantain, buckhorn plantain, Carolina plantain, hedgeweed, old world diamond flower, knotweed, tufted love grass, Shepherd's purse, Florida pusley, common purslane, common lambsquarters, pigweed, kochia, wild violets, knotweed, and other broadleaf weeds, apply 187 pounds of fertilizer (0.15 pounds active ingredient per acre of mesotrione impregnated on fertilizer) per acre of turf. Apply 4.3 lbs. of this product per 1,000 sq. ft. Apply to newly seeded or to over-seeded established plantings of the following grasses: Kentucky bluegrass, centipedegrass, tall fescue, fine fescue (creeping red, chewings, hard), and perennial ryegrass. Mesotrione may reduce density of fine fescue seedlings. Mesotrione can be used on grass seed blends that contain less than 20% by weight of fine fescue (creeping red, chewings, hard).

WHAT TO EXPECT: Weed stems and leaves will begin to turn white within a few days of treatment. Weeds will turn brown and die. Two to three weeks may be required for complete control. Weeds not killed are often stunted and non-competitive in turf with flowering disrupted.

For best results the product should be applied without skips or misses. Determine the correct amount of product for the turf area to be treated. For best results apply half the rate in one direction and the remaining half rate at right angles to the first application. This procedure will minimize the chance for color streaking and erratic weed control.
